Trimble NetRS, NetR5, NetR8, NetR9 - Unix commands for catching binex/RT17 streams

705 Sarah Doelger February 27, 2014 Software and Scripts, Trimble NetR9, Trimble NetRS
725

1. nc 192.168.1.2 9999 | teqc -binex +rx_state

   sends receiver voltage and temperature data to stdout from a binex stream

2. nc 192.168.1.2 9999 | teqc -binex +met filename.met

   catches a BINEX stream, sends observation data to stdout and prints met data to given filename

3. nc 192.168.1.2 9999 | strings

   catches ASCII strings (including raw met data) from the binary output of a BINEX stream

4. nc 192.168.1.2 9999 | teqc -tr s +met filename.met
   tail -f filename.met

   catches a RT17 stream, sends observation RINEX to stdout and prints met data to given filename. tail command allows for viewing met data in real time. Useful for field tests.

5. nc 192.168.1.2 9999 | teqc -binex +eds > filename

   catches a BINEX stream, sends raw met data to stdout, prints observation data to given filename.
