

GSA 2012: Terrestrial Laser Scanning (Ground-Based LiDAR) Methods and Applications in Geologic Research & Education

Article Number: 761 | Rating: Unrated | Last Updated: Thu, Nov 15, 2012 at 2:07 AM

2012 Geological Society of America Short Course - Sun., 4 Nov., 2012

Terrestrial Laser Scanning (Ground-Based LiDAR) Methods and Applications in Geologic Research & Education

Instructors: David Phillips and Christopher Crosby, UNAVCO; Carlos Aiken, The University of Texas at Dallas

Course Description: Terrestrial Laser Scanning (TLS), a.k.a. ground-based LiDAR, workflows and best practices for the acquisition and processing of TLS data, an overview of various TLS platforms, and examples of science and education applications. This 1-day workshop will consist of lectures and hands-on application of TLS equipment and data processing. TLS provides very high-resolution images over relatively small areas, is relatively inexpensive to acquire, and has been used successfully to support a wide range of geoscience investigations from outcrop mapping to deformation monitoring.

Presentations:

- [Introduction to TLS and Applications](#) (Phillips)
- [Introduction to TLS data collection and processing](#) (Crosby)
- [UNAVCO TLS support resources, community lidar resources, future directions](#) (Crosby)
