

Global Mapper - Tutorials and Beginner Resources

Article Number: 827 | Rating: Unrated | Last Updated: Tue, Sep 8, 2015 at 10:39 PM

Users' Manual

The Global Mapper Users' Manual is available [here](#).

YouTube Channel

Global Mapper has an extensive YouTube channel featuring many useful webinars and how-to's. You may find it useful to start with the following webinars:

- [Getting Started With Global Mapper](#) - describes basic functions such a data importation, tools
- [LiDAR Processing in Global Mapper](#) - includes reclassification tools, extracting vector features, creating terrain models.
- [Working With Terrains in Global Mapper](#) - includes instructions on how to generate contours, perform volumetric calculations, slope analysis, etc.

User Forum

A [user forum](#) exists with a catalog of over 8,000 entries.

Tutorial

The Global Mapper website provides a [tutorial for beginners](#). Registration and access to a license are required, but the tutorial is free otherwise.

The contents of the tutorial are listed below:

- **Section 1 - Introduction to the principles of GIS**
 - Importing/accessing data
 - Creating and editing vector features
 - Adjusting the appearance of vector features
 - Working with raster layers
 - Querying and filtering data
 - The basics of spatial analysis
 - Methods for sharing data
- **Section 2 - Generating a terrain surface and creating contours using LiDAR data**
 - LiDAR importing
 - LiDAR editing/processing
 - Data visualization
 - Creating a gridded surface model
 - 3D modeling
 - Shader options
 - Contour generation
- **Section 3 - Creating a thematic map**
 - Creating and managing attribute data
 - Joining attributes from an external file
 - Performing a calculation to create new attributes
 - Applying a shading pattern to reflect recurring text values
 - Applying a shading pattern to reflect numeric values
 - Designing page layout elements including a legend and map title.
 - Printing the map or exporting to a geospatial PDF
- **Section 4 - Rectifying an image file**
 - Importing a base map for rectification
 - Using field-collected ground control for rectification
 - Modifying the projection
 - Choosing a rectification method
 - Adjusting the properties of the rectified map
- **Section 5 - Extracting vector features from a raster layer**
 - Vectorizing a specific color from a topographic map
 - Vectorizing a range of colors to delineate features in from an aerial image
 - Delineating an elevation range from a digital elevation model
 - Outlining areas within a slope angle threshold
- **Section 6 - Creating a watershed model**
 - Creating a drainage network from a digital elevation model

- Outlining the watershed boundaries for a defined area
- Adjusting the watershed boundaries based on area and flow variable
- Creating a water drop analysis model
- Delineating the catchment area for a defined location
