Trimble GPS Configurator

The GPS Configurator™ software lets you configure a survey-grade Trimble GPS receiver (e.g. 5700/R7) connected to your desktop or laptop computer running the Windows operating system. You can use the GPS Configurator software to view the current receiver settings, check satellite tracking and signal strengths, change receiver settings in real time and load configuration files. [Note: We prefer using [Trimble Configuration Toolbox](#) for loading configuration files.]

GPS Configurator Port 2 On COM1
