Trimble NetRS receiver firmware version 1.2-5 mistakenly shipped

365 Freddy Blume February 6, 2009 Firmware Notes and Downloads 3430

In 2008 and early 2009 Trimble mistakenly installed firmware version 1.2-5 on some new and RMA-return NetRS receivers. This was a private release specifically designed for the U.S. Coast Guard and is protected under Dept. of Commerce laws for their use only in the US.

All receivers containing this firmware should be rolled back to 1.2-0 or earlier accepted version. 1.2-5 will not be evaluated or supported for community use by UNAVCO.

Please see this article for download and installation instructions for version 1.2-0
